REVIVING CLEVELAND'S HISTORIC THEATER DISTRICT

AWP maintains traffic control for a major downtown renovation project.

PROJECT TYPE

City construction project, Cleveland OH

CLIENT CHALLENGE

The downtown historic theater district in Cleveland underwent a major renovation with \$16 million in signage and streetscape improvements, which required extensive traffic control planning, equipment and site safety considerations.

THE SOLUTION

Our main goal was to provide the city of Cleveland with an efficient re-routing of downtown traffic and secure work zones for contractors to safely operate heavy machinery. We accounted for temporary traffic routes, road closures, road signage, and safety equipment set up and tear downs. Our solution included:

- A comprehensive traffic control plan
- Daily road closures of Euclid Avenue for crane operations
- 30+ temporary traffic control signs, type-III barricades, and channelizing devices
- 60+ ADA-compliant pedestrian barricades

PROJECT RESULTS

The result was a successful 3-month long traffic control plan with zero safety issues or concerns. AWP executed the plan in and around the busy downtown Cleveland construction area in a safe, efficient, and professional manner.
